

1. Download and install the GitHub client from
 1. <https://desktop.github.com/>
2. Inside the GitHub client on your computer go to:
 1. File -> Clone Repository

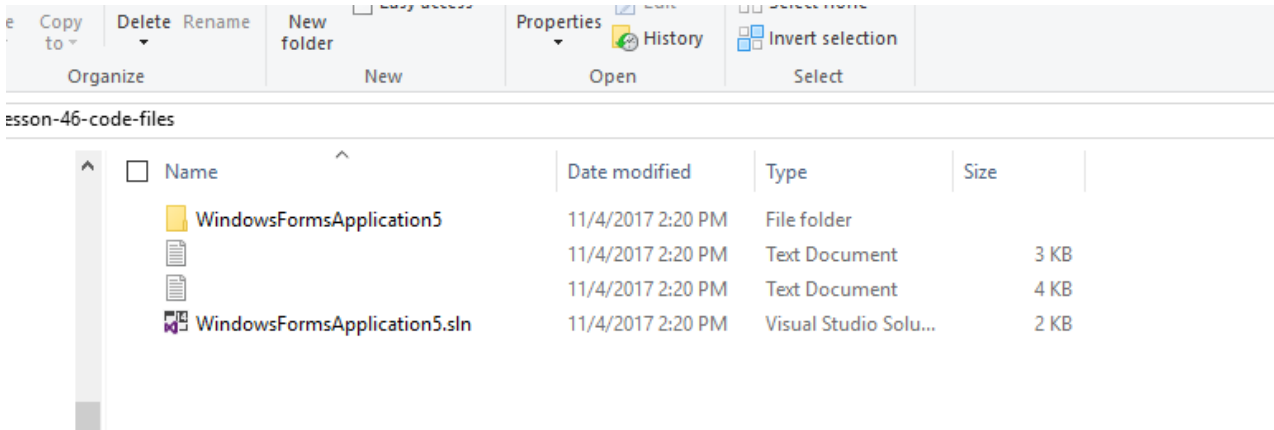

3. Choose URL and put in the URL shown below.

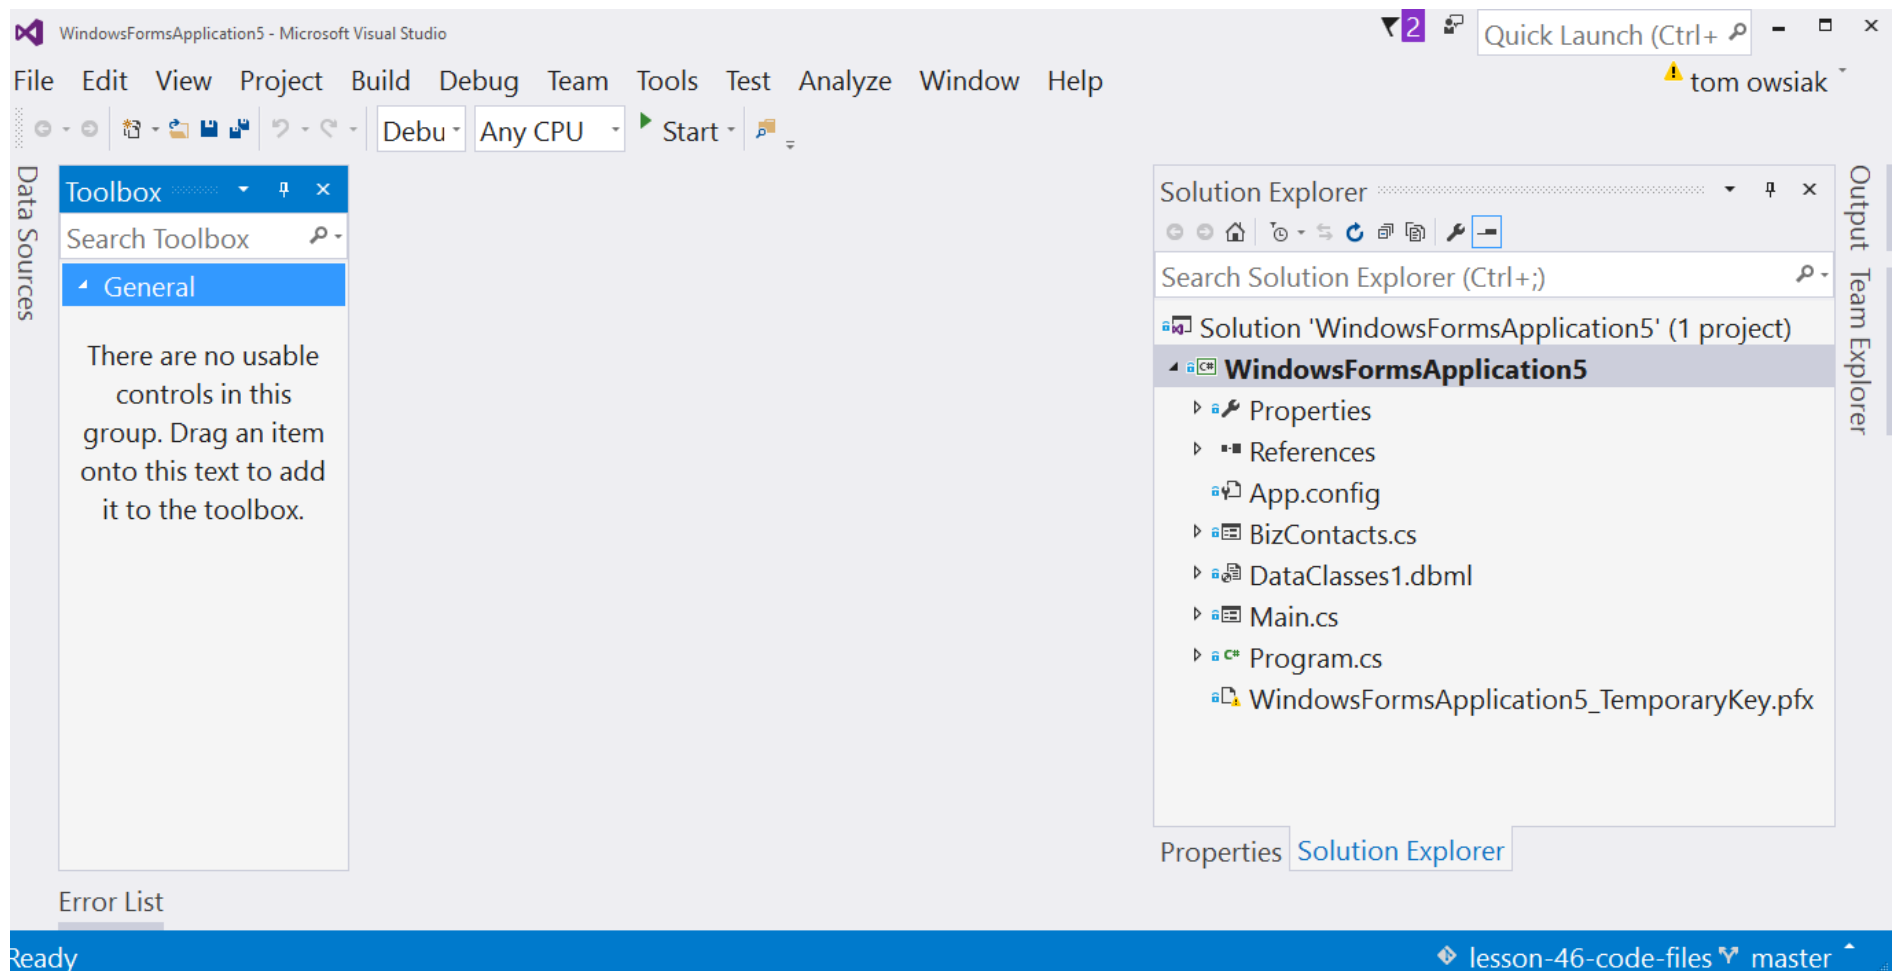

4. After the repository is cloned, go to Repository-> Show in Explorer.

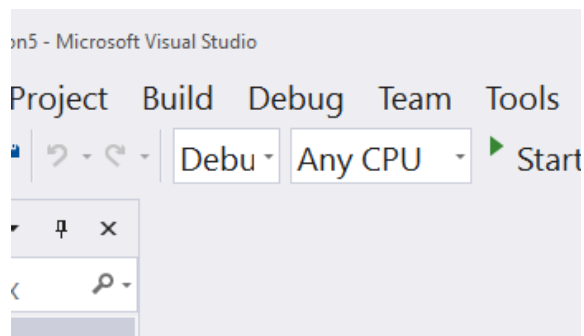

5. File should open as shown below.

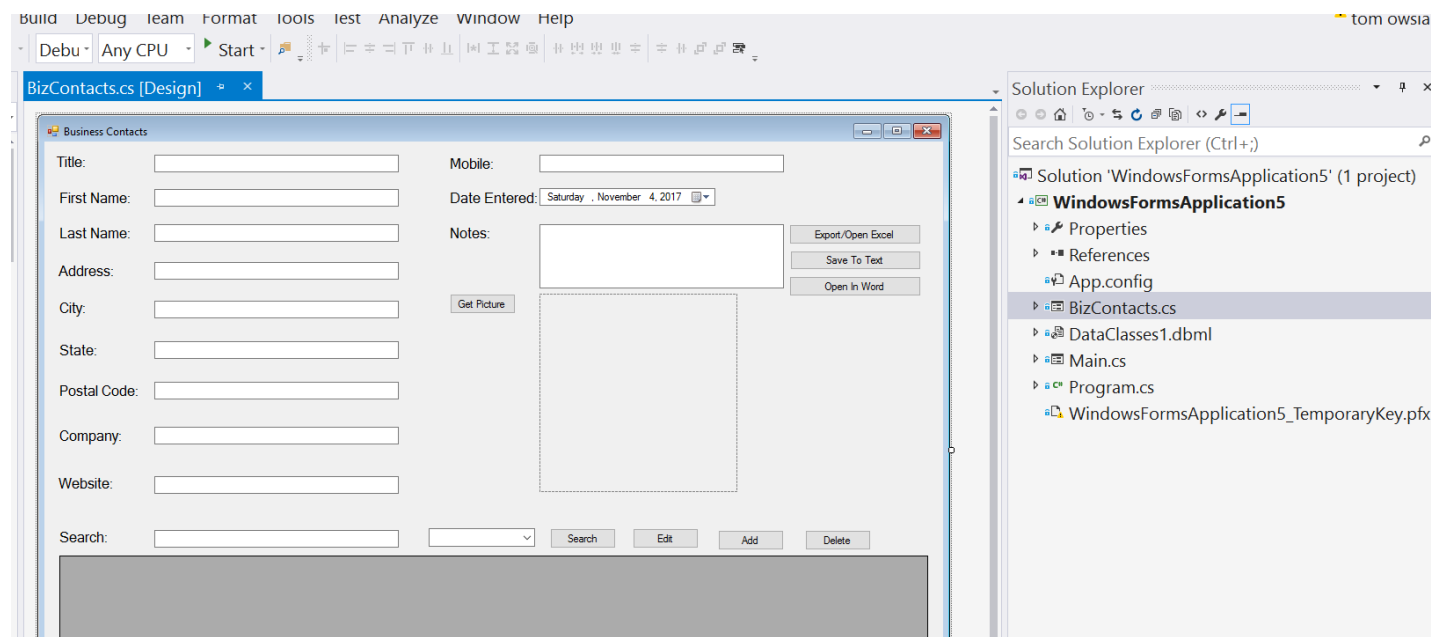

6. Click on WindowsFormsApplication5.sln in Windows Explorer so the project loads.

7. Build the project first.

8. Click through the project files to be sure each one opens.

9. Start the project using Start from the tool bar.
10. Please remember the code depends on a connection string to SQL Server.
11. Please also remember the code depends on the table, so the structure must be the same.
12. I've put a copy of the database under lesson resources. You will have to restore it from back up to use it.
